(57) ABSTRACT

Provided is a breeding container which is adapted to be lethal to container breeding mosquitoes which contains:

- a walled structure defining an internal volume, the walled structure being constructed and arranged to contain an aqueous liquid within at least a portion of the internal volume:
- at least one opening in the walled structure disposed so as to allow mosquitoes to enter the walled structure;
- mosquito egg laying structure in the internal volume constructed and arranged such that female mosquitoes contact a surface of the mosquito egg laying structure; and
- an insecticide that is lethal to mosquitoes present in an amount sufficient to kill the female mosquitoes in contact with the surface. Also provided is a lethal mosquito breeding container kit and a method for controlling the population of container breeding mosquitoes.
